

Practical Slips Questions

Class :- F.Y. B.Sc. Blockchain Technology Sem II , Subject : Advanced Python Programing

Slip1 :

Q1. Write a python program using class to accept the details of Student (Rno, Name, Per) and display it.

Q2. Write a Python program to check whether a given PAN number is valid or not. (Use Regular expression)

Slip 2:

Q1. Write a Python program using constructor to accept employee name and salary from user and display it.

Q2. Write a Python program using MySQL Database to accept the details of Teacher (Tid, TName, Subject) from user store it into the database and display it.

Slip 3:

Q1. Write a Python program to perform following operations on NumPy library.

- a. Sum() b. Product c. max d. lcm 5. GCD

Q2. Write a Python program to accept the details of college (Cid, Coll_Name, address) and display it. (Use Super () and multilevel inheritance)

Slip 4:

Q1. Write a Python program to check whether given mobile Number is valid or not. . (Use Regular expression)

Q2. Write a Python program using Socket to send clients message to the server and vice versa.

Slip 5:

Q1. Define an abstract class Shape with abstract method area(). Write a Python program to calculate the area of circle.

Q2. Write a Python program to read Excel file using Pandas Library and clean it.

Slip 6:

Q1. Write a Python program to update the salary of a given employee. Assume Emp table with the attributes eno , ename, salary is already created.

Q2. Write a Python program to read the list of employee names and their salary and draw bar chart of it.

Slip 7:

Q1. Write a Python program to display the details of a given employee. Assume Emp table with attributes eno, ename, sal is already created.

Q2. Write a Python program to check whether given pincode number is valid or not. (Use Regular expression)

Slip 8:

Q1. Write a Python program using socket for chatting application.

Q2. Write a Python program to check whether given number is prime or not. (Use Constructor)

Slip 9:

Q1. Write a Python program using MySQL database to delete the details of a given employee. Assume Emp table with attributes eno, ename and sal is already created.

Q2. Write a Python program to declare integer array with 5 integers and perform the following operations:

- a. Sum b. sort c. reverse d. product e. gcd

Slip 10:

Q1. Write a Python program to create emp table with attributes eno, ename, sal. Insert the records into the table and display it.

Q2. Write a python program to check whether given Adhar number is valid or not. (Use regular expression)
